Claims 13-49 stand withdrawn without traverse. Claims 3, 6 and 7 have been cancelled. Claims 1, 2, 4, 5 and 8-12 remain under consideration. Applicant's amendment cancelled species in the claims directed to basic phosphates as shown in the art cited therein. In response to the amendment made the office has expanded the search and obtained new art drawn to shellac compositions containing a basic amino acid.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 58-78539.

The reference abstract discloses a composition comprising an aqueous coating agent comprising 1-50% shellac, 1-10% ascorbic acid and 0.5-10% basic amino acid such as lysine, arginine, ornithine, etc.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 58-78539, as applied above, in view of US 5567438.

The difference between these claims and the JP reference is the addition of particular plasticizers. US 5567438 teaches the addition of plasticizers such as polyethylene glycol, triethyl citrate, organic acid monoglycerides and sorbitol at column 5, lines 1-25. It would

Art Unit: 1755

have been obvious to one of ordinary skill in the art to add one of these known plasticizers because the US reference teaches they are known to plasticize aqueous shellac films.

Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP 58-78539, as applied above, in view of US 6072086.

The difference between the JP reference and the instant claim is the addition of oligosaccharides or various sugars to the shellac composition of claim 1. US 6072086 teaches polydextrose (an oligosaccharide) functions as a plasticizer for shellac film forming compositions. It would have been obvious to one of ordinary skill in the art to add an oligosaccharide to shellac coating compositions because the US reference teaches they plasticize shellac films at column 14, line 25.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
